

62

36. (Amended) A kit for determining activity of a protease in a sample, said kit comprising: at least one viral protein or virus [obtainable by a method according to any one of claims 1-25 or by a use according to any one of claims 26-30]produced by a process for producing said virus and/or viral protein, said process comprising:  
providing a cell with at least a sequence encoding at least one gene product of an adenoviral E1 gene or a functional derivative of said adenoviral E1 gene,  
providing said cell with a nucleic acid sequence encoding said desired virus and/or said desired viral proteins,  
culturing said cell in a suitable medium and allowing for expression of said virus and/or said viral proteins, and  
harvesting said virus and/or viral proteins from said suitable medium and/or said cell.

3

38. (Amended) The kit of claim 36 [or the use according to claim 37], wherein said protease comprises trypsin.

39. (Amended) The kit according to claim 36 [or the use according to claim 37], wherein said sample comprises culture medium.

40. A method for concentrating influenza virus under conditions capable of at least in part preserving virus infectivity, said method comprising:  
obtaining a cell cleared supernatant comprising said virus from a culture of cells, and ultrafiltrating said supernatant under low shear conditions.

41. The method according to claim 40, wherein said low shear conditions are obtained with a hollow fiber.

42. (Amended) The method according to claim 40 [or claim 41], wherein said culture of cells comprise *in vitro* cultured cells.

43. (Amended) The method according to [any one of claims 40-42]claim 40, wherein said ultrafiltration is performed with filter comprising a cut off of 750 KD.

A3  
Control

44. (Amended) The method according to [any one of claims 40-43]claim 40, wherein said concentration further comprises at least a partial removal of proteins comprising a molecular weight smaller than 750 KD.

45. Infectious influenza virus or derivatives thereof [concentrated with]produced by a method according to [any one of claims 40-44]claim 40.

Please add the following new claims:

A4

46. The method according to claim 41, wherein said culture of cells comprise *in vitro* cultured cells.

47. The method according to claim 41, wherein said ultrafiltration is performed with filter comprising a cut off of 750 KD.

48. The method according to claim 46, wherein said ultrafiltration is performed with filter comprising a cut off of 750 KD.

49. The method according to claim 41, wherein said concentration further comprises at least a partial removal of proteins comprising a molecular weight smaller than 750 KD.

50. The method according to claim 42, wherein said concentration further comprises at least a partial removal of proteins comprising a molecular weight smaller than 750 KD.

51. The method according to claim 43, wherein said concentration further comprises at least a partial removal of proteins comprising a molecular weight smaller than 750 KD.

52. Infectious influenza virus concentrated by the method according to claim 41.
